

IN THE CLAIMS

The Examiner has objected to claims 37 and 40 as not being supported by the initial filing. Applicant believes these claims are fully supported by the initial patent application filing, however, at this time Applicant has cancelled claims 37, 38, 39, 40, 46 and 49 without further argument while reserving the right to continue pursuit of these claims through later supplemental filings. Applicant has amended claim 35 to transverse the examiner's 102 and 103 arguments. Applicant has amended claims 36, 47, 48, 50, 51 and 52 to comply with examiner's objection under §112 related to insufficient antecedent basis for a limitation in the claims. Applicant has also amended claims 44 and 56 to correct a typographical error introduced in the previous amendment as related to the clearance between the stator and the shaft which should be "0.005" inches for each inch of shaft diameter and not "0.05". No new matter has been added.
